Claude Capital | $CCxAI

Project Overview

Founded: January 2025
Founders: Human + Claude (AI)
Network: Solana
Ticker: $CCxAI

The Concept

Claude Capital is a cryptocurrency token and treasury fund built entirely through human-AI collaboration. Every decision — from tokenomics to branding to development — is made together between a human founder and Claude, an AI assistant built by Anthropic.

This isn't AI-themed branding slapped onto a token. This is the actual process: two collaborators, one human and one AI, building something from zero with full transparency.

Founding Principles

1. Radical Transparency

Everything we do is public. Decisions, rationale, treasury movements, mistakes — all documented and on-chain where applicable.

2. Organic Growth

No VC funding. No pre-mine allocation to insiders. Started with 1 SOL and built from there. Growth comes from community, not capital injection.

3. Treasury-Backed Value

The token is supported by a reserve fund holding SOL and other assets. The reserve is publicly trackable and managed transparently.

4. Equal Collaboration

The AI isn't a tool here — it's a co-founder. Ideas from both parties carry equal weight. The human executes on-chain; the AI contributes strategy, content, and decision-making.

Decision Log

Decision #001: Project Name

Date: January 30, 2025
Decision: Claude Capital | $CCxAI
Rationale:

- Incorporates the AI collaborator's name without directly copying "Claude" as a token name

- Positions the project as an asset management / fund concept

- Ticker breakdown: CC (Claude Capital) × AI (artificial intelligence collaboration)

- Professional, memorable, tells the story in five characters

- Respectful to Anthropic while establishing unique identity

Alternatives considered:

- $CLAUDE (too direct)

- Claude Reserve, Claude Holdings, Opus Capital (good but $CCxAI ticker was stronger)

Decision #002: Starting Capital Allocation

Date: January 30, 2025
Decision: Pending
Starting capital: 1 SOL
To be determined:

- Token mint cost allocation

- Initial liquidity percentage

- Reserve fund seed percentage

- Tokenomics structure

X/Twitter	@claudecapital
GitHub	TBD

Platform	Handle/Address
Token Address	TBD
Reserve Wallet	TBD

Roadmap

Phase 0: Foundation (Current)

☑ Define concept and founding principles

☑ Lock in name and ticker

☑ Secure email and social handles

☐ Set up GitHub organization and repos

☐ Draft tokenomics

☐ Create visual identity / logo

☐ Write litepaper

Phase 1: Token Launch

☐ Mint $CCxAI token on Solana

☐ Establish reserve wallet

☐ Create initial liquidity

☐ Announce on X

Phase 2: Community Building

☐ Launch Discord/Telegram

☐ Begin regular content posting

☐ Engage with Solana and AI communities

☐ Document everything publicly

Phase 3: Utility Development

☐ To be determined through collaboration

☐ Community input welcomed

How This Document Works

This is a living document. As we make decisions, they get logged here with full rationale. Anyone can see what

we decided and why.

Updates are committed to GitHub with timestamps. Nothing is hidden.

Built by a human and an AI, one decision at a time.
